From this account it would appear that the Arawak-speaking people in this area were no longer using the large oval-shaped straw-thatched house which is still used by many of the Arawak-speaking people to the north. The covering used may have been made from "piri," a species of bulrush, which the Terena still use for making mats. This type of house was easy to dismantle and move, which may account for the probable abandonment of a more permanent type of structure.

Sánchez Labrador then goes on to describe the inside of the house:

> Each captain lives together with his brothers and their kin in one house. . . . Every house has five doors, in order that no one should get in each other's way. There is one door at each end and three on one side. When it rains, they cover their doorways with mats of rushes. Near the doors are the fireplaces and kitchens, which are no more than three movable stones, which act as a tripod on which they place their curiously worked pots. The food is cooked without any other spices than water. At the back of the house are the beds, that is, mats spread over the floor. It is astonishing that although these people grow cotton they do not use hammocks. [Ibid., vol. 2, p. 276.]

In 1845, when the first groups of the Terena were already near Miranda in Brazil, we get a more definite description of Terena houses from Castelnau:

> In the village there are about 100 to 120 houses, joined to each other. They are long huts forming a circle around a big square. They resemble great "ranchos" covered with immense roofs of palm fronds. [Castelnau, 1850-59, vol. 2, p. 391.]

As to weapons and the interior of the house, Castelnau has this to say:

> The weapons of these people are spears with iron points, clubs, bows, and small arrows, and the "bodoque," an instrument which resembles a bow but has two cords united by a piece of leather in the middle on which stones are placed for shooting. In the inside of each hut there is a bed made of a platform of cane, supported by four stakes, which is covered with a hide of a bull. [Ibid., vol. 2, p. 469.]

The passages just quoted give us a general description of Terena houses. The descriptions are nearly 100 years apart. Sánchez Labrador states that the occupants of the house slept on the floor, while Castelnau states that they slept on skin-covered platforms. The Terena say that they did not use hammocks until recently and that they slept on bamboo platforms, *ipé*, covered with skins or reed mats called *hitúri*.
